

Application No. 10/749,269

In the Abstract

Please substitute the following amended Abstract for the Abstract as currently pending:

Improved organophotoreceptor comprises an electrically conductive substrate and a photoconductive element on the electrically conductive substrate, the photoconductive element comprising:

(a) a charge transport material having the formula

where Y<sub>1</sub> and Y<sub>2</sub> are, each independently, an arylamine group;

R<sub>1</sub> and R<sub>2</sub> comprise, each independently, H, an alkyl group, an alkenyl group, a heterocyclic group, or an aromatic group;

X<sub>1</sub> and X<sub>2</sub>, each independently, are bridging groups;

E<sub>1</sub> and E<sub>2</sub> are, each independently, an epoxy group; and

Z is a linking group comprising an alkyl group, an alkenyl group, a heterocyclic group, or an aromatic group; and

(b) a charge generating compound.

The charge transport materials can be crosslinked to a polymeric bind, either directly or through a crosslinking agent. Corresponding electrophotographic apparatuses and imaging methods are described.
